

Eaton Lighting Project Management

Today's new lighting systems and modernization projects can be complicated— with many vendors to manage, deadlines to meet and details to oversee.

Employing a team of project management professionals that understand the complexities of lighting system projects and have the skills and tools necessary to handle project complexities.

Our project management team has extensive experience in healthcare, education, industrial government, data center and utility markets.

Eaton's project management approach

Eaton's Lighting Project Management team utilizes a robust 5 step project lifecycle process that aligns with industry standards. This approach ensures consistency with each project, effective communication and planning and provides visibility within the company for any issues or risks associated with the project as those risks appear.

Eaton is serious about taking this care in project management, because projects rarely go smoothly from start to finish. Communications systems that drive early planning and can identify unintended consequences from project changes early in the process are essential. Course corrections and risk-mitigating action plans are the result.

Eaton project management offerings

Eaton's project management organization provides the services to support the needs of your specific projects. Following are the services our team provides.

Technical and logistical project management

This service includes coordination of documentation, delivery and system startup, as well as schedule coordination and project status updates on. Eaton's technical expertise allows for coordination of onsite resources to coincide with project deliverables and timelines.

Turnkey project management

This service involves the complete management of turnkey lighting design and installation projects, including the management of preselected third parties, integration support and resolution of compatibility issues.

Project process: start to finish

At Eaton, we know a successful project requires pro-active planning, communication of project objectives and formal feedback on performance at multiple points of the project. Following is Eaton's project process:

- 1** Project Initiation:
The project management team establishes a comprehensive plan, outlining all deliverables, milestones and risks
- 2** Project Kick-off:
The team reviews project schedule, including project scope, key milestones and contacts
- 3** System Execution:
Eaton team will review Sequence of Operation (SOO) and pre-wire information with stakeholders to ensure accurate installation and programming
- 4** Site Execution:
The team coordinates onsite startup of system, addressing and facilitates commissioning and integration along with onsite training
- 5** Project Closeout:
At this point, the team finalize the operation and maintenance manuals and provide final closeout information including contacts for lifecycle support services

How Eaton's project management services benefits you

Eaton project managers are subject matter experts in Eaton's lighting control systems and have a proven process for every project they run, ensuring a smooth and profitable job. With Eaton's lighting project management, you have dedicated, technical support along with the experience and national support to ensure project success. Our project management experts provide accurate, timely information how you want it—so you never have any questions about deliverables or milestones. With the expense and coordination that goes along with large-scale projects, it makes sense to have a dedicated, experienced project management team to ensure the project is managed properly to meet deadlines and budget requirements. In addition, Eaton's project management team not only provides you with the support you need for a successful project, but the team also provides you with the information for ongoing support and information after project completion to be sure of a healthy project lifecycle for all equipment.
