## I love the global control the mobile app gives me. I use it every day. Our customers love controlling the lighting and A/V for their events with the tablet.99

- Matthew Dick, IT Manager, Kalahari Resorts, Sandusky

#### The Ideal Lighting Control Solution

The Kalahari Convention Center hosts a wide variety of events from large conventions and corporate training exercises, to exquisite weddings, and small meetings. This multi-function space demanded a lighting control system that could accommodate the incredible flexibility of the floor plan and provide unmatched controllability in any room. The tight timeline of the project required that the system be installed quickly and correctly the first time.

The iLumin<sup>™</sup> architectural lighting control system outfitted the Kalahari Convention Center in over 100 unique lighting zones and equipped each area with dimming and scenebased control, automatic partition detectors, integrated lighting and A/V systems control, and a mobile app providing the ideal lighting control solution in a package that was easy for staff and client occupants to use. Universal dimming panels saved time during installation helping the project meet its tight deadline for completion.

### Cooper Controls exceeded our expectations. I have already recommended them to others. 99

- Matthew Dick, IT Manager, Kalahari Resorts, Sandusky

#### **Unmatched Mobile Control for Clients and Staff**

The Kalahari Operations team uses the iLumin mobile app to control the lighting throughout the convention center with an iPad. Whether turning lights On and Off, showcasing the capabilities of the space to a potential customer, or programming the lighting scenes for an upcoming event, the Kalahari team accomplishes it all from one mobile control. This mobile app has become so popular that the Kalahari Convention Center now offers clients the opportunity to program and manage the lighting and A/V for their own event from an iPad and many do.

#### Faster, Easier Wiring Phase with Universal Dimming Panels

The lighting design of the Kalahari Convention Center incorporated many different lighting sources into nearly every space. The iLumin<sup>™</sup> universal dimming panel saved time during the wiring phase of the project by eliminating the need to match every light source with its sourcespecific dimming card, a mix and match practice commonly required when wiring traditional dimming panels. Instead, the universal dimming panel uses a universal dimming card that is capable of dimming any light source, allowing for dramatically faster and easier system installation.

## <sup>66</sup> The straightforward wiring of the universal dimming panel gave us a definite advantage in completing this job on time. 99

- Keith Buckley, Project Manager, South Shore Electric, Inc.

#### **Cooper Controls Support Team**

Cooper Controls is dedicated to customer satisfaction and support. From the design and construction team, to the building owner, or end user, Cooper Controls is committed to meeting the needs and expectations of each of its customers.

## 66 We ended up making some changes late in the game and the Cooper Controls support team was extremely helpful. 99

- Keith Buckley, Project Manager, South Shore Electric, Inc.
